ABSTRACTED-PUB-NO: RU 2039517C

BASIC-ABSTRACT:

The toothbrush comprises handle (1), neck (2) with end element (3) and head (4) made of an elastic material with cleaning elements (5). The brush has a regulator (6) attached to rod (7) and driving projection (8) located in longitudinal slot (9), or connected to the handle by a threaded fastening. A cavity (11) lies between head (4), which is made of an elastic material, and end element (3) in which the regulator (6) can move. The profile of the head

(4) and cleaning elements (5) is altered by moving the projection (8) in slot (9).

ADVANTAGE - Allows head profile to be altered to suit differing tooth surfaces which are being cleaned.
